Publication Date

May 2018

1. Purpose

The purpose of this document is to outline features and changes contained in the VoiceOver® 5.7.10 release. The primary purpose of this release is to address an issue where application processes were not ending on exit of VoiceOver when used with Structured Results Entry.

This document is not intended as a user guide or training document. Those documents are available from a Voicebrook representative.

2. Defect Corrections

2.1 Structured Results Entry not allowing application processes to end on exit of VoiceOver

Behavior Presented

In environments where Structured Results Entry (SRE) is set to launch when logging in to VoiceOver, the Voiceover.exe and natspeak.exe processes were not ending on exit of VoiceOver and would have to be terminated.

New Behavior

Exiting VoiceOver when configured with SRE will now end the application related processes.

2.2 FRM Speech Bar Error on “Close User”

Behavior Presented

Users may have seen an error (FRM SpeechBar – SaveUserSpeechFiles) when closing the loaded user profile in VoiceOver. Clicking ‘Ok’ on the error dialog box would dismiss the error and the user would then close.

New Behavior

Users will no longer see the “FRM - SpeechBar – SaveUserSpeechFiles” error on “Close User”.

3. Installation

Your Voicebrook representative will review the installation\upgrade process with you.
